Mahfozur Rahman

Full-Stack .NET Developer

Dhaka, Bangladesh | +880 1758 091506 | mahfozmt@gmail.com
linkedin.com/in/mahfozmt | github.com/mahfozmt | mahfozmt.github.io

Summary

Full-stack .NET developer with 6 years of experience building and supporting production software for clients in the US and Bangladesh. Started on .NET Framework, ADO.NET, and T-SQL stored procedures, and now builds multi-tenant SaaS with .NET 8, Angular, and Microsoft Azure. Takes features from database design and APIs through the user interface, CI/CD, and production support. Uses AI coding agents daily to work faster, while planning, reviewing, and testing every change personally. Microsoft Certified Professional (MCP).

Skills

Languages: C#, T-SQL, TypeScript, JavaScript, HTML, CSS
.NET: ASP.NET Core, .NET 8, ASP.NET Web API (REST), Entity Framework Core, LINQ, Blazor, Hangfire, .NET Framework, ASP.NET MVC, Web Forms, Windows Forms, WPF, ADO.NET, Windows Services
Front End: Angular, RxJS, Angular Material, Kendo UI, SlickGrid, jQuery
Databases: Microsoft SQL Server (stored procedures, query optimization, SQL Server Agent), PostgreSQL
Cloud and DevOps: Microsoft Azure (App Service, Blob Storage), GitHub Actions, CI/CD, Docker, Docker Compose, Nginx, Linux, IIS, Git
Practices: CQRS, dependency injection, role-based access control, unit and integration testing, code review, debugging
AI-Assisted Development: Claude Code, Google Antigravity, LLM API integration
Mobile: Flutter, Xamarin

Experience

Software Developer Aug 2023 – Present
COBAIT *Dhaka, Bangladesh (Hybrid)*
Building BizTRAQ (biztraq.com) for Triulta, Houston, TX, USA

- Develop full-stack features for BizTRAQ, a multi-tenant platform on Microsoft Azure that manages documents, records, and workflows for US businesses in healthcare (HIPAA), fuel distribution, and case management.
- Build .NET Web API services on SQL Server with Entity Framework, and data-heavy Angular screens with Angular Material, SlickGrid, and Kendo UI, for file storage, records, workflows, and e-signatures.
- Built two-factor authentication (email and SMS codes) with hashed codes, expiry, lockout, and per-tenant policies, and secured file access with short-lived Azure Blob SAS links.
- Built the .NET 8 document-processing service (viewing, editing, format conversion, OCR), packaged it with Docker, and set up GitHub Actions CI/CD to Azure App Service with OpenID Connect sign-in.
- Built AI Document Chat, which lets users summarize and ask questions about their documents: an Angular chat panel and a .NET Web API that checks permissions and tenant scope before calling an LLM service.
- Work daily with Claude Code and Google Antigravity as coding agents for implementation, refactoring, tests, and documentation; plan each task, review every diff, and debug and test the result before release.
- Tune SQL Server queries for large multi-tenant data, review pull requests, write unit and integration tests, and resolve production issues.

Software Consultant (Part-Time) Aug 2023 – Present
LivingHub Technologies *Dhaka, Bangladesh*

- Provide architecture guidance, enhancements, and production support for the LivingHub platform.

Software Engineer Jan 2023 – Aug 2023
LivingHub Technologies *Dhaka, Bangladesh*

- Architected the .NET 6 back end of LivingHub (livinghub.tech), a SaaS that automates building utility management, including accounting, service-charge collection, and expense tracking, on PostgreSQL and EF Core using CQRS.
- Automated recurring updates and notifications with Hangfire background jobs.

- Containerized the platform with Docker and Docker Compose and deployed it behind Nginx on Linux.
- Built the Angular front end with Kendo UI, and built and published the Flutter Android app on Google Play.

Software Engineer Nov 2022 – Jan 2023
Global Software Architects (GSA) *Dhaka, Bangladesh*

- Tuned slow production queries and set up SQL Server Agent jobs for scheduled data processing.
- Reviewed and merged pull requests, deployed builds to the test server, and mentored junior developers.

Junior Software Engineer Oct 2020 – Oct 2022
Global Software Architects (GSA) *Dhaka, Bangladesh*

- Built the reporting back end of AutoGuard (autoguardtracking.com), a live GPS vehicle tracking system, on .NET Framework Web API and ADO.NET.
- Wrote the stored procedures behind its fleet reports, such as fuel consumption and distance driven, using complex T-SQL with loops and PIVOT, debugged by hand.
- Developed features for the AutoGuard Xamarin app with Google Maps, FCM push notifications, Twilio SMS, and Mailgun email.
- Built ASP.NET MVC and Web Forms modules and Web API endpoints for Strictly FX (USA), an enterprise suite that runs shows, crew, logistics, and permits for a touring special-effects company.
- Maintained a C# Windows Forms desktop application, built Windows Services that extend a Microsoft Dynamics solution, and added PDF, CSV, and XLSX report exports.

Projects

BabyKeyBoardSmash github.com/mahfozmt/BabyKeyBoardSmashByMahfoz
Open-source, full-screen Bangla keyboard learning game for toddlers on Windows, built with .NET 8 and WPF.

Certifications

Microsoft Certified Professional (MCP) Nov 2020
Microsoft · Passed Exam 70-486: Developing ASP.NET MVC Web Applications (score 933) · MCID 990525782

Full Stack ASP.NET Core (96 hours) 2022
PencilBox Training Institute, Dhaka

Education

Professional Diploma in Enterprise Systems Analysis and Design (C#.NET) 2019 – 2020
IsDB-BISEW, Dhaka · 1,100 hours

Bachelor of Arts (Honours) in Islamic Studies 2017
National University, Bangladesh
